

The Importance of Proper Posture

Correct Alignment Leads to Better Health

Hope Bentley

Talk of good posture often generates images of women walking in a circle with books balanced on their heads or soldiers standing at attention. But good posture does not have to be rigid or ridiculous. In fact, far from ridiculous, it may be the key to good health.

According to Patrick Wroblewski, a Boulder, Colorado-based structural integration practitioner, "Good posture is a dynamic, working awareness of how gravity is coming down through the body." In other words, just as the body moves and changes throughout the day, so should posture.

Wroblewski explains that many people come in to his practice with complaints

misalignment, like standing with a hip cocked to one side. These common forms of less-than-perfect posture mean less-than-healthy consequences for the body.

Does Posture Matter?

Ever feel low on energy? Get sick often? Experience headaches or digestive upset, like constipation or diarrhea? Feel less agile than you used to be? Your postural habits may be behind these symptoms.

Proper posture means the body is aligned so that all the muscles work as they were designed to. On the other hand, poor posture leads to inefficient

Working in front of a computer often leads to poor posture. Learn how to counteract the effects.

of lower back pain, and stiff necks and shoulders, most of which have a direct correlation to poor posture. If a person sits hunched in front of a computer screen all day, it's likely the head hovers towards the screen, the lower back has collapsed and the tail bone is supporting the weight, and legs are crossed or splayed. Bad standing posture includes the same hunching or lateral

movement, causing the muscles to have to do extra work. For instance, if the head isn't resting correctly on top of the neck and spine but hovers over the chest instead, the muscles at the back of the neck have to remain contracted to hold the head up. The results? Circulation becomes hindered, and oxygen and

nutrients have a hard time flowing through the body. Contracted muscles are less able to receive hydration and energy, and the tissue eventually becomes hard and fibrous. Eventually, muscles can pull bones out of alignment and cause serious problems and discomfort.

The bottom line is, poor posture can lead to muscular stress and fatigue, which can in turn lead to deficient circulation, compromised immunity, and poor lymph flow--which brings us back to low energy, frequent illness, headaches, digestive issues, and waning agility. So to answer our earlier question, yes, posture matters.

Perfecting Posture

Correcting poor posture requires undoing the hardening, or fibrosis, of the muscles that have been habitually contracted, allowing them to relax and the bones to move back into place. Perhaps a simple concept, but not an easy task.

Wroblewski uses a combination of techniques to help correct posture: Swedish massage can help increase circulation and release chronically held areas. Deep tissue massage helps wake up the body and reverse some of the fibrosis in the tissue. And other bodywork techniques can further precipitate postural adjustments. He says, "Any kind of manipulation--craniosacral, acupressure--can cause an unwinding of tension and allow the body to release to the position in which it belongs."

Wroblewski also recommends movement education, an umbrella term that includes many types of bodywork, such as Alexander Technique, Feldenkrais Method, Hellerwork, and Trager Approach. Movement education advocates that one's body structure and movements can get stuck in habitual, unhealthy patterns. Movement education unwinds the patterns and teaches the body, as well as the mind, anew. This is done through a series of sessions where practitioners may use hands-on manipulation to teach the student different, more efficient ways to move, sit, stand, reach, bend, lift and walk. Ultimately, this balances the body and allows energy to move freely.

Movement education techniques may be

especially beneficial for people suffering from chronic difficulties, but also for anyone trying to achieve higher levels of physical and mental wellness.

According to Wroblewski, bodywork can induce a "neutral reprogramming," so that people can start from scratch and learn to recognize when good posture is breaking down. Then the necessary adjustments can be made.

What's a Body To Do?

Desk jobs are notorious for wreaking havoc and causing postural impairments. Sitting for hours on end staring at a computer screen is likely one of the worst things you can do to your body. If you spend a lot of time sitting, make sure both feet are flat on the ground to give yourself a "tripod" of stability for the spine to rest on. Also, be sure to take frequent breaks, even if it just means walking to the window for a

moment, or getting a glass of water. And when standing, distribute weight evenly between both feet, and don't lock the knees or ankles.

Good posture takes practice, practice, practice and constant reminding. Wroblewski suggests leaving reminders in places where you will run into them throughout your day.

Old habits die hard, and this is true for muscular habits too. Be sure to schedule a series of massage treatments to help retrain the body. And talk to your practitioner about stretches and posture tips that can enhance your massage sessions. As you progress, you will notice less joint and muscle pain, fewer headaches, more energy, and possibly even stronger immunity and better digestion. Finally, you will develop a stronger awareness of your body and an increased sense of well being.

Practice makes perfect! Good postural habits require repetition and practice, practice, practice.

Lavender

An Essential Oil for Fundamental Health

Laurie Chance Smith

Lavender essential oil is a one-stop medicine chest, helping to reduce anxiety, fatigue, and stress and balance hormones, increase the immune response, lower blood pressure, and relieve pain. To utilize lavender's healing benefits at home, mix five to 10 drops of lavender essential oil in one ounce of jojoba oil or unscented lotion. (Essential oils shouldn't be applied directly to the skin; it's best to partner them with a carrier oil, liquid, or lotion.)

EARACHES

For earaches, dab one drop of lavender massage oil behind the ear and rub gently. Alternatively, place one drop of lavender oil on a cotton ball and carefully place inside the outer ear.

HEADACHES

Inhaling lavender is also effective for headache relief. Add a few drops to a bowl of warm water and breathe. Gently rub lavender massage lotion on the temples, forehead, and base of the neck.

COLDS

Lavender oil can also help break up coughs and clear sinuses. Colorado-based holistic aromatherapist Nicola McGill suggests the regular home-use of antiseptic essential oils such as lavender to help avoid colds and other infectious diseases. Add a few drops to a vaporizer to help clear colds and infuse the home with lavender's scent.

STRESS

At night, six to eight drops of lavender added to a warm bath helps melt away stress and relieve fatigue. Blend a footbath by adding three drops of lavender to a bowl of warm water, sink your feet in, and relax. For help inducing sleep, add two or three drops of lavender essential oil to the underside corner of your pillow.

TRANQUIL AROMA

A human takes 23,040 breaths a day, and each inhale floods the system with scent. Rely on lavender's tranquil aroma to clear the way toward peaceful days.

Lavender is loaded with wellness properties.

The Scoop on Sugar

Not Such a Sweet Story

Shelley Burns, N.D.

Most people have no idea just how much sugar is in the foods Americans consume. However, this sweet culprit may be behind many health issues, including skin problems. Here's why.

When refined carbohydrates, otherwise known as simple sugars, are consumed in excess, they cause an increase in blood sugar levels. This excess sugar (glucose) attaches itself to proteins and is referred to as glycosylation. All cells in our bodies have a protein component to them including our hormones, enzymes, cholesterol, and immune cells. As proteins become coated with glucose, they are unable to work effectively.

Collagen, that vital component of a glowing complexion, makes up 40

percent of the proteins in the body. Glycosylation hastens protein cross-linking, which weakens collagen. The result: wrinkles.

But wait, there's more. Sugar also causes an increase in levels of cortisol, the stress hormone, which can interfere with hormonal balance and increase inflammation. Skin inflammation can manifest as acne, puffiness under the eyes, and eczema. Sugar also increases insulin levels and reduces sensitivity of insulin. In fact, research shows people with acne process sugar poorly, which could be a direct result of high cortisol and high insulin levels in the blood.

And finally, sugar depletes the necessary nutrients required to keep the immune

system healthy. For example, sugar interferes with the way the body uses vitamin C, which is needed for the formation of collagen and elastin as well as immunity. It can also lead to sluggish digestion, which also affects the skin.

The best way to steer clear of sugar is to read labels. Avoid products that list sugar in the first three ingredients, and be aware of words ending in "ose" such as sucrose, dextrose, and maltose, all of which are sugar indicators. Also avoid processed foods and refined carbohydrates, such as white flour, white rice, and white potatoes.

Whenever the sweet allure of sugar tempts you, remember, sugar-free is key to beauty.

*No sky is heavy
if the heart be
light.*

-Winston Churchill

Hello and Happy Fall! If all that yard work or rain has got you feeling achy, then schedule a massage today. Thanks to all of you who donated to the Harvesters Food Drive this summer. It was a great success and will help many families in need. As Thanksgiving approaches, I want you all to know I feel very blessed to have such wonderful and loyal clients. Thanks for your business, friendship and support.

The December special: "The Works"-aromatherapy neck wrap soother, paraffin treatment for the hands, 15-minute foot reflexology and 60-minute massage for \$85. When scheduling this session on-line, click the 90-minute session button.

Need a gift idea? We have soothing neck and shoulder wraps, large(\$35) or medium (\$25)sizes available. Eye pillows(\$14),sombra gel(\$10),and still point inducers(\$20)make great stocking stuffers. As always,gift certificates can be purchased for massage services or dollar amounts. The purchase of a 60-minute or longer gift certificate in December comes with a complimentary peppermint and shea butter lip balm.

Schedule your massage at www.wellnessworkskc.com To purchase gift certificates or products, call 913-208-4645 or e-mail Michelle at massage@wellnessworkskc.com

To help with the increasing cost of operations, effective January 2010, all services will go up \$5. Happy Holidays!
